International dimension

An international outlook is essential for today’s engineers.

Our international policy takes this into account:

- Promoting students’ international mobility by encouraging as many of them as possible to benefit from experience abroad (internships, final year project, 3rd or 4th year abroad or double degree program).
- Welcoming foreign students on our courses (graduate engineering degree, post-graduate diplomas and Advanced Master’s degrees).
- Establishing and nourishing partnership agreements with foreign universities (a number of agreements enable students to complete part of their course abroad).
- Contributing to development aid to spread French knowledge and know-how abroad by the implementation of specialized training and teaching support in certain foreign engineering schools.
