

Study visits

ENTPE, a school dedicated to sustainable regional development, is committed to developing international exchanges that will enable it to promote the French vision in its areas of expertise and benefit from international initiatives.

/// Academic Exchanges and Double Degree

Would you like to study at ENTPE for a semester, an academic exchange year or a double-degree?

1. First, contact your home institution to find out if it is a partner of ENTPE and to find out about its timetable and selection procedures.
2. Your home institution must officially nominate you to ENTPE.
3. Once you have been nominated, ENTPE will contact you to review your application and help you prepare for your mobility.

/// Available curricula taught through English as a medium of instruction

For non-degree-seeking Exchange students, ENTPE offers 2 *pathways available through English as a medium of instruction.*

The course catalogue taught through English is designed for Master/Post graduate students only (i.e. Master 1 and Master 2 students).

It is offered in Semester 9 at ENTPE (from September to the end of January).

English-speaking students interested in carrying out an academic mobility at ENTPE may build their learning agreement with the available courses.

/// International admission to ENTPE (excluding partnerships)

Are you an international student wishing to enroll at ENTPE on an international admission basis (i.e. without any partnership with your home institution)? ENTPE will not charge you any application fees.

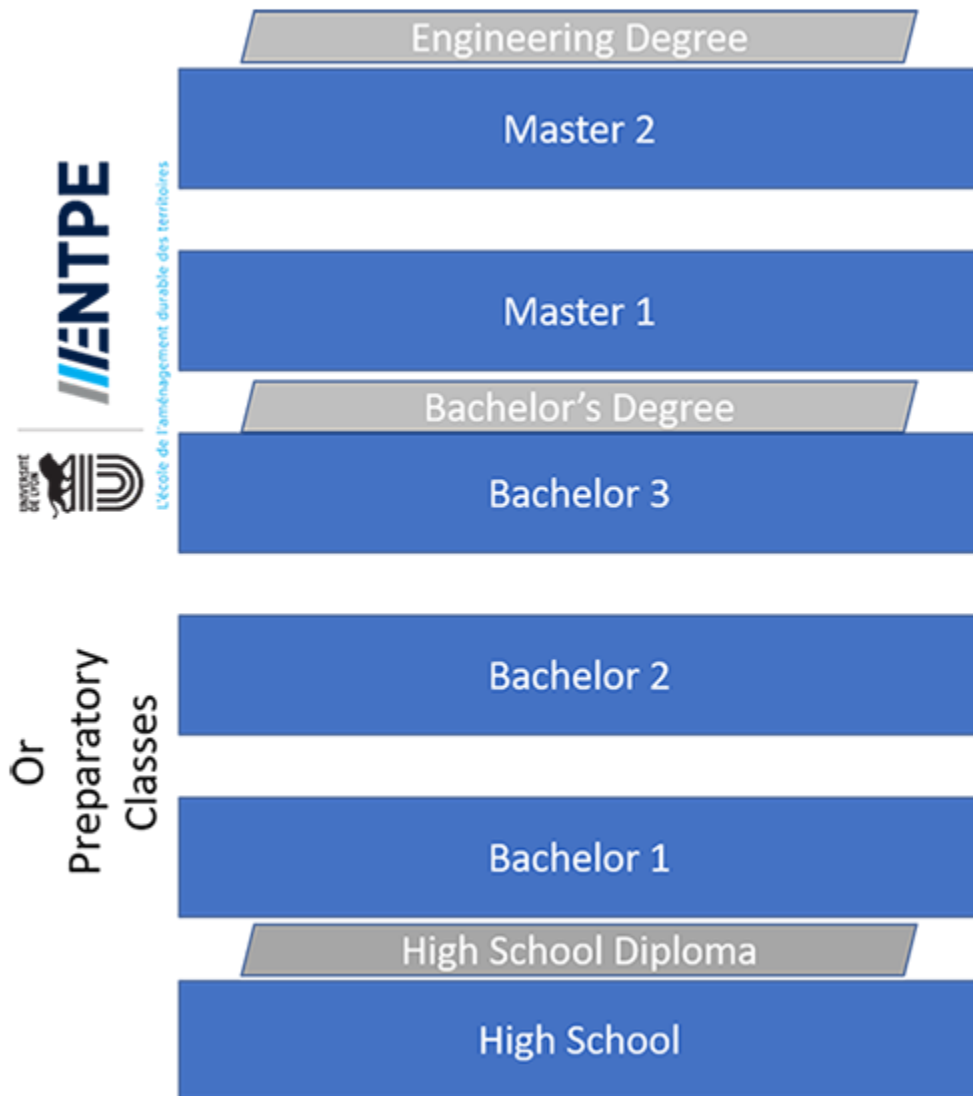

1. Register on Campus France's "Études en France" platform to submit your application. We recommend that you contact your nearest Campus France office to help you with this process.
2. Once your application is complete on Etudes en France, ENTPE will contact you for the parallel application procedure (oral interview).
3. Once you have been accepted, the pre-consular phase can begin on Etudes en France, with a view to obtaining your visa.

The "Etudes en France" procedure only applies to students living in one of the countries listed on the Etudes en France home page.

If your country of residence is not listed, this means that it is not covered by the “Etudes en France” procedure. In this case, please contact ENTPE directly at international.student@entpe.fr

/// ENTPE’s training programs

All our degree-seeking programs are taught in French. You must therefore have a minimum B2 level in French.

Bachelor

The Bachelor's degree is taught in French and is accessible after high school and a scientific high school diploma. For international students, admission is only possible for the 1st year, as the 2nd and 3rd years are apprenticeships, and this very specific status is only available to international students who have already spent one year in the French system under student status.

[Access the Bachelor's program page](#)

Engineering program

To enter the engineering program, most students need to pass an entrance exam. This takes 2 years of preparatory classes. In addition, admissions are considered on the basis of student records, particularly for international students who are unable to take the competitive entrance exam.

The engineering program lasts 3 years (or 2 years under certain conditions).

> **1st year application**

- Hold a Bachelor (3 years of higher education) or equivalent in one of the following specialties: mechanics, physics, civil engineering, mathematics;
- Your academic results will be studied on a case-by-case basis according to the different international systems in force;
- Proof of a B2 level in French and English.

> **2nd year application**

- Hold a MASTER 1 (4 years of higher education) or equivalent in one of the following specialties: mathematics, mechanics, applied mathematics, physics, civil engineering or life and earth sciences;
- Your academic results will be studied on a case-by-case basis, according to the different international systems in force;
- Proof of a B2 level in French and English.

Master Programs

ENTPE also offers Masters programs in the following fields: acoustics, environmental, energy and transport economics, civil engineering, risks and the environment, urban planning and development, cities and urban environments...

[Access the full list of ENTPE Master's programs](#)

Master of science program

The Master of science in Mobility Management is an English-taught programme which combines transport economics, transport policy and planning, mobility engineering, spatial planning and urban environment into a single study programme.

[Access the Master of science in Mobility Management program page](#)

Specialized Master

The Specialized Master is a post-graduate program lasting at least 2 semesters, and including theoretical teaching, personal research work in a company and the presentation of a professional thesis. The Specialized Master is a label of the Conférence des Grandes Écoles (CGE)

Doctorate/PhD program

To enroll in a doctoral program, you must have already completed a Master's degree.

/// Information on the system of higher education in France and at ENTPE

The "LMD" system

The French higher education system applies the so-called "LMD" system (Bachelor - Master - Doctorate) in line with the Bologna process, with :

- Bachelor = 6 semesters = 180 ECTS (after high school diploma)
- Master = 4 semesters = 120 ECTS (after a Bachelor or equivalent)
- Doctorate = 6 semesters (after a Master's degree or equivalent)

For more information on French diplomas, the LMD system, and equivalencies, visit the [Campus France website](#).

The French "Grandes Ecoles d'Ingénieurs", like ENTPE, set high standards and are highly selective at entry.

As a result, these schools generally have smaller student bodies, allowing for greater pedagogical supervision and more individualized support.

When they are accredited by the "CTI" (French Commission for Engineering Titles), Engineering Schools' programs impose certain graduation requirements, notably a certain level of English.

Detailed conditions can be found in the regulations of the curriculum you are interested in.

The European Credit Transfer System (ECTS)

Within the European Community, the international validation of diplomas and training programs is based on a common credit system known as ECTS (European Credit Transfer System). The ECTS credits obtained can be capitalized and transferred, for example when studying at several different institutions. One ECTS corresponds to 25 to 30 hours of combined class time and personal work.

Types of courses and assessment methods

Classes are taught in a variety of formats:

- Lectures (CM): theoretical instruction given to the whole class.
- Practical work (TP): work sessions of variable duration carried out by small groups in laboratories, workshops or in the field.

Subjects are also called “Course Units” (CU) and are grouped into “Teaching Units” (TU). It is the Teaching Unit that carries the validation and therefore the associated ECTS credits. The average of all the CUs that make up the TU, with their possible coefficients, gives the grade for the TU.

Assessment is based on continuous assessment, i.e. there are no final exam sessions, but grading takes place throughout the year, even though many written exams take place at the end of the year.

Assessments can take several forms:

- Oral questioning on your knowledge
- Oral defense: oral presentation of a project or report
- Marked homework

- Written reports on a project or internship
- Written final exams on your knowledge
- Graded practical works in the laboratory or in the field

Each assessment is graded from 0 to 20 (0 being the lowest and 20 the highest). The training program regulations give you the rules to follow to validate your year.

Students who fail to achieve a sufficiently high grade may register for **make-up exams** at the end of the semester (see the calendar given at the start of the academic year).

Grading system

French Grades	Distribution
A	10% of students with the best grade
B	Next 25%
C	Next 30%
D	Next 25%
E	10% of students with the lowest grade

French Grades	Equivalent U.S Grades	GPA equivalents
14-20	A	4.0
12-13,9	B+	3.3
11-11,9	B	3
10,5-10,9	B-	2.7

10,1-10,4	C+	2.3
10	C	2
9-9,9	C-	1.7
8-8,9	D	1.0
0-7,9	F	0
