Erasmus +

ENTPE has been a signatory of the Erasmus+ Charter since 2014. It has received accreditation for the ERASMUS+ program covering the period from 2014 to 2020.

By signing this charter, ENTPE has committed to complying with all its requirements. These requirements concern, in particular, the conditions in which students are hosted, recognition of students' achievements and non-discrimination.

These commitments are in line with the School's international strategy and its values.

The Erasmus+ program developed and implemented by the European Commission makes it possible to fund all or part of a student's international mobility (primarily in Europe).

This program concerns:

/// In the framework of a so-called "Study Abroad" mobility

European students outside France who wish to complete a period of mobility at ENTPE (Master level). Enrolled in the first or second year of a Master’s degree (or equivalent), such students may come and take courses (graduate engineering degree or Master) at ENTPE, provided a bilateral agreement has been signed with the home institution. In this case, as stipulated in the charter signed by ENTPE, they can benefit from free tuition, provided they have expressly signed up to the Erasmus+ scheme in their home institution. They may benefit from a grant from their home institution to support their mobility.
