This event is a wonderful opportunity to share the latest advancements and innovations in the field of asphalt pavements and to bridge the gap between scientific research and applied engineering.

The symposium will join the strengths of 3 RILEM Technical Committees of Cluster F, making it an exceptional and unique event:

- 264-RAP (“Asphalt Pavement Recycling”),
- 272-PIM (“Phase and Interphase behaviour of bituminous Materials”),
The participation of researchers and practitioners from different fields will allow tackling key scientific challenges related to properties of bituminous materials and structures and innovative practices in the pavement domain.
